

Assignment No1_Excel_Green_ DA10

You have been provided with data from a company which has many departments. The data shows employee related information and their experience details. You are required to use this data for analysis based on the following guidelines:

Data Cleaning:

- Check and remove blank values from the dataset.
- Check if any duplicate rows are present and delete them.
- Your client needs analysis by gender and education level.
 - Which column can you use for analysis on this? Perform data cleaning for the column you have identified.
- Separate the prefix and job role in two separate columns

Quick Analysis:

- Find total employees in sales department
- Find total employees in Research & Development
- Find total female employees

Data Transformation:

- Create a column to show employees who have worked for more than 5 years:
 - Label the values such that:
 - If employee has worked more than 5 years, say “experience of 5+ years”, else say “0 to 5 years experience”
- If employee has total working years as more than 15 and has worked in only one company, then say “Low risk employee” else says “high risk employee”

Reflection:

Do you think any column is missing in this data which would have been helpful in analyzing trends? If yes, which column could that be and how would you use it?
